

Justification for ₹28 Crore Platform Investment

Model A — Full Government Contract (Year 1)

While ₹21 crore represents a highly optimised baseline cost for developing the core Pariksha Mitra platform, an investment of **₹28 crore** is recommended to ensure the platform is built to true national scale from Day One. The additional **₹7 crore** directly strengthens learning outcomes, technical robustness, language reach, and long-term sustainability — thereby multiplying the national return far beyond the incremental outlay.

Key Value Delivered by the Additional Investment

- **Higher Quality Content (₹2.0 Cr extra)** — Enables engagement of more verified subject experts and superior video production standards, directly improving concept clarity and exam success rates.
- **Stronger Live Class Infrastructure (₹1.5 Cr extra)** — Raises concurrent user capacity from 10 lakh to 15–20 lakh, ensuring uninterrupted national-level live sessions without degradation.
- **Enhanced AI & Personalisation (₹0.7 Cr extra)** — Delivers a more accurate diagnostic engine, adaptive study plans, and robust Hindi-English doubt resolution, increasing student retention and effectiveness.
- **Wider Language Coverage (₹0.6 Cr extra)** — Extends support from 12 to 14–15 Indian languages, significantly improving access for students in Southern and North-Eastern states.
- **Superior Security & Compliance (₹0.3 Cr extra)** — Provides comprehensive CERT-In readiness, DPDP Act 2023 compliance, load testing, and audit preparedness required for a Ministry-owned national platform.
- **Scalability & Risk Mitigation** — Builds the platform right the first time, avoiding costly rework, technical debt, and service disruptions that typically arise in under-funded national digital projects.

In a project of this visibility and national importance, the marginal increase of **₹7 crore** represents less than 0.015% of the projected annual family savings of **₹50,000 crore**. Investing adequately upfront is fiscally prudent: it maximises student outcomes, protects government reputation, and delivers a durable public digital asset.

We therefore recommend the **₹28 crore** allocation under Model A as the optimal balance between cost efficiency and the quality, scale, and reliability expected of a Ministry of Education national platform.
